Colleagues, respected representatives of FIGO member societies and guests:

Let me first begin by thanking you all for the great honour you bestowed upon me three years ago in Kuala Lumpur when you chose me as your President Elect. As much as it was a great honour, which I very much appreciated, it was a great responsibility, and I realised from the very first moment that it was a real challenge, too.

A real challenge because, although progress in women’s and newborns’ healthcare has been real, it is far from what had been anticipated by the international community, remembering that our time horizon to reach the MDGs is now only six years. FIGO - as a professional voluntary organisation embracing 124 member societies of gynecology and obstetrics around the world - is expected to play a major role in this regard. Our aim is: every pregnancy wanted, every birth safe, every newborn healthy, every wanted pregnancy achieved, and every young woman HIV/AIDS-free and treated with respect and dignity.

In our endeavor to bring about a change in the progress towards achieving women’s and newborns’ health-related MDGs, we should not be discouraged by the slow progress achieved in the past, because if we choose to be bound by the past, we will never move forward. We have the power and the potential to bring about the changes we seek, but only if we all have the courage to make a new beginning - a determined beginning - keeping in mind and building upon what has been achieved in the past.

In line with the overall vision and mission of our Federation as outlined in its constitution, FIGO is implementing a change over the next three years, a change which will make it more visible and palpable in the everyday practice of our fellow obstetricians and gynecologists around the globe, particularly in underprivileged countries. Our goal is to improve the quality of women’s and newborns’ healthcare through education, training, and capacity-building.

I know - and have even been told by some skeptics - that this is a difficult goal to achieve. I fundamentally disagree. I am optimistic, and I am determined to commit FIGO to sustained efforts focusing on saving the lives of women and newborns, and improving the quality of their lives, particularly in underprivileged countries, through education, training, and capacity-building. The Federation shall strengthen its ties with member societies and regional federations; co-ordinate strengthening ties of its member societies with each other, North to South and South to South; encourage member societies and their members to implement ethical guidelines in their healthcare and research on women and newborns; and not lose sight of advocacy for women’s and newborns’ rights concerning the highest attainable standards of health and wellbeing.

This is not possible without having a defined strategy, with a clear workplan and timelines. Workplans are not realistic and achievable unless we build upon our achievements and identify our shortcomings and constraints - a task which I have undertaken, guided by my 20 years’ association with FIGO activities. My proposal for an eight-point workplan for the coming three years - to make FIGO more visible and palpable to obstetricians and gynecologists around the world, and to
play its role in achieving the health-related MDGs - can be reviewed in the article, ‘A vision for FIGO 2009-2012’ [1].

In implementing this workplan, FIGO - as a global Federation - is well aware, and recognises the sovereign right of each country, consistent with national laws and development priorities, with full respect for the various religious and ethical values and cultural backgrounds of its people, and in conformity with universally recognised international human rights.

I reaffirm that the greatness of FIGO is never a given. It must be earned. Our journey has never been one of shortcuts or settling for less - it is a long, rugged path towards saving mothers and newborns and improving the quality of their lives.

Let us strive hard to finish the work we are here for.

Kind regards

Professor Gamal Serour, FIGO President

*Reference

The year in focus

Chief Executive’s Overview

At the start of another exceptionally busy year for FIGO, it is time to take stock of progress made, and plans still to come to fruition. I would especially like to say a few words about our recent Congress.

I am extremely delighted that my first World Congress as Chief Executive was so well attended and applauded. It is clear from feedback that delegates were extremely impressed with the efficient organisation, and the compelling Scientific Programme in particular. It is never easy to co-ordinate such a complex and wide-ranging event, and FIGO rose to the challenge in all respects. My thanks go to everyone who helped to make this occasion such an enormous success - it has been a tremendous example of international teamwork, and I know from my conversations with colleagues that we have taken away valuable insights for Rome 2012.

FIGO has also had a successful year with regard to the implementation of projects in the areas of maternal and newborn health, the prevention of unsafe abortion and adolescent health and fistula, thanks to the generous support of donors, in particular, the Bill and Melinda Gates Foundation, UNFPA, SIDA and an anonymous benefactor.

In 2010, FIGO will be building upon its many new projects and collaborations. Eg:

- Discussions are ongoing with JHPIEGO regarding submitting a proposal on the management of pre-eclampsia and eclampsia. A Memorandum of Understanding (MOU) for long-term collaboration with FIGO is planned, along with a detailed workplan and budget.

- FIGO actively participated in the Prevention of Postpartum Hemorrhage Initiative (POPHI: 2005-2009), which held its final meeting in November 2009 in Washington. The new PPH Consortium will include FIGO.

- Discussions are ongoing with the Chief of Health in UNICEF regarding supporting a project with FIGO on Maternal and Newborn Health.

- Additional fund-raising by FIGO for fistula and FGM activities is being negotiated with a number of partners.

- Discussions are ongoing with Comic Relief regarding its possible support of FIGO’s Maternal and Newborn health activities.

- Contacts are being established with DFID for the support of Reproductive Health activities, as well as support of fistula training centres.

- An MOU is being developed for collaboration between Pathfinder International and FIGO. A workplan will also be developed for collaboration in the areas of Reproductive Health and Family Planning (RH/FP), and maternal and newborn health, as well as for capacity-building of member associations in low-resource countries.

- Initial contacts are now established with the International Planned Parenthood Federation (IPPF) for close collaboration in the area of RH/FP.

At the start of a new year, I believe it is timely to reflect again on the FIGO Vision Statement:

‘FIGO has a vision that women of the world achieve the highest possible standards of Physical, Mental, Reproductive and Sexual Health and Wellbeing throughout their lives’

2010 brings new challenges - we must continue the effective teamwork and collaboration that enabled success in 2009.

Best wishes

Hamid Rushwan
FIGO Chief Executive
A major highlight of the Congress news agenda was the launch of FIGO’s DVD on FGM - ‘The Cutting Tradition: insights into female genital mutilation’ - in collaboration with filmmaker Nancy Durrell McKenna of SafeHands for Mothers. The film aims to educate health professionals worldwide on the issues surrounding this highly controversial subject.

FIGO/SafeHands was delighted to have secured the services of Meryl Streep as the film’s narrator. As one of the world’s most accomplished actresses, she brings her characteristic dignity to a harrowing and complex subject. Dorothy Shaw, Past-President, explained the reasons behind the production: ‘Around 140 million women and girls worldwide have already undergone the trauma of FGM; each year, tragically, a further three million join them. Migration has brought these women into contact with health professionals who often do not understand the cultural significance of the tradition. It is vital that these professionals are made fully aware of the consequences of FGM and how to manage them, treating women with dignity and understanding their life context.’

In 1994, FIGO passed a resolution at the Montreal FIGO General Assembly condemning FGM, and the committee for ethical aspects of reproductive health has two guidelines opposing it, the most recent concerning medicalisation. In 2008 the United Nations released a statement - ‘Eliminating Female Genital Mutilation’ - and called for its eradication within a generation. Ten agencies - OHCHR, UNAIDS, UNDP, UNECA, UNESCO, UNFPA, UNHCR, UNICEF, UNIFEM and WHO - supported this announcement, and their position was echoed by numerous NGOs and professional health and rights associations.

Congress hits the headlines

As a significant Cape Town event, the FIGO Congress attracted a substantial amount of coverage in the South African media, with mentions in many key publications, including the Cape Times, the Cape Argus, Business Day, the Times and the Athlone News. In addition, several major health news websites ran Congress stories, including health24.com and health-e.org.za.

Coverage included:

- Athlone News - Talk By Menopause Expert (30 September 2009)
- Business Day - Care Could Save 39,000 Women, Babies (7 October 2009)
- Cape Argus - Many Stillbirths In South Africa ‘Avoidable’ (7 October 2009)
- Cape Times - Medical System Lets Down Women Seeking Safe Abortions (6 October 2009)
- Cape Times - ‘Too Many Women And Babies Dying In Childbirth’ (7 October 2009)
- Cape Times - We Have An Opportunity To Wipe Out Cervical Cancer For Good (7 October 2009)
- Cape Times - Mid-Level Workers Replace Surgeons In Poorer Countries (6 October 2009)
- The Times - Unsafe Abortions Big Killer (7 October 2009)
- health-e.org.za - Silent Deaths (7 October 2009)
- health24.com - Cervical Cancer Deaths Preventable (8 October 2009)
- F IG O’s high-profile Congress press conferences were well attended, with the following topics attracting special interest:
  - Key Links Between Women’s Rights And Their Health
  - World Report Launch
  - Meeting Millennium Goals 4 & 5
  - Prevention Of Unsafe Abortion
  - Adolescent Pregnancy
  - ‘The Cutting Tradition’ (launch of FIGO DVD on FGM)
  - A New Chance To Control Cervical Cancer
  - Task Shifting And Sharing To Prevent Tragedies In Women’s Health

International Federation of Gynecology and Obstetrics

Award-winning Streep joins forces with FIGO/SafeHands
Powerful partnerships unleash FIGO’s potential

Extracts from Past President Dorothy Shaw’s Congress speech

An occasion of ‘firsts’

‘We are in a country whose natural beauty is exquisite, and whose people are proud to share their culture with us tonight and over the next few days, providing glimpses into its richness and the sense of community. This Congress is the 19th in FIGO’s 55-year history and the very first time we have been on the African continent. As FIGO’s first woman president, this is a particularly special honour for me.

The FIGO tree of life

‘Our FIGO tree of life [the FIGO logo] is indeed an appropriate metaphor for an organisation that connects associations of obstetricians and gynecologists from all over the world, whose common interest is in science and understanding the importance of the life context of women to their health.

Our progress on unsafe abortion...

‘I promised we would address the burden of maternal mortality from unsafe abortion. A major grant was secured for an initiative to prevent unsafe abortion that resulted in enrolment by 54 countries and action plans in 43 countries – all concerned with saving women’s lives, all involving multiple partnerships, including the ministry of health, to ensure implementation and sustainability. This response from almost half of our member societies and some new national associations was tremendously validating, and Anibal Faundes has been outstanding as the project director for this highly collaborative initiative.

...on cervical cancer...

‘Advocacy on cervical cancer prevention has been an active part of my term, and FIGO has become a member of the governing council of Cervical Cancer Action. An initiative led by Joanna Cain has provided a guidance document that is being released at this Congress, and we will have a press conference that includes Nobel Laureate Harald zur Hausen, honoured for his work on the HPV vaccine. We are collaborating with the International Paediatric Association in support of access to the HPV vaccine in all countries. Imagine - we can actually see an end to this disease that kills women in their prime.

...and on sexual violence and HIV

‘The third area of focus was to highlight the connection between sexual violence and HIV, and I am pleased that Stephen Munjanja accepted the task of leading a group of international experts to produce guidelines on this topic that can be used by FIGO member associations.

Member associations: the bedrock of FIGO

‘I am gratified to report that we were successful in obtaining a major grant from the Bill and Melinda Gates Foundation to fund an initiative to improve policy and practice by strengthening FIGO member associations. This will enable member associations of FIGO in low- or middle-resource countries with high levels of maternal and newborn mortality and morbidity to play a catalytic role in improving maternal and newborn health services.

Mandela’s advice: a blueprint for ‘task-shifting’

‘Following Nelson Mandela’s approach, he had some excellent advice, probably
well known to many here tonight. He noted that seeking understanding and listening is more likely to get progress, if not consensus. Knowing the goals and seeing things in grey rather than black and white will create opportunities for the partnerships needed to accomplish those goals. Mandela tried to understand and engage his opponents, helping them with their problems even while in prison. These are powerful lessons for all of us.

**Looking to the future**

‘One of my favourite proverbs is from Africa and teaches us, “If you want to go fast, go alone: if you want to go far, go together.”

Full speech available from communications@figo.org

Another high-profile FIGO supporter, Sarah Brown, Patron of the White Ribbon Alliance, and co-leader of the Maternal Mortality Global Campaign (a powerful partnership in which FIGO was a co-founder), made her mark at the Congress with a specially recorded video message of support.

She highlighted the problems of maternal mortality worldwide and praised FIGO for its global efforts in helping women achieve the best possible conditions for giving birth successfully and safely.

In a recent communication to FIGO and other stakeholders, Sarah summed up the challenges ahead:

‘In 2010 we face the great challenge of setting out exactly how we can reach the Millennium Development Goals that we promised ourselves we would achieve for humankind by 2015. Looking back over 2009, we can take a moment to congratulate ourselves on the achievements made for MDG5 to reduce deaths in pregnancy and childbirth. Time and time again so many women - and men - have given generously of their time, and showed overwhelming strong and continuing commitment to this issue.

‘Every one of you who thinks of innovative and creative ways to contribute your own skills and talents is a champion of this cause. You have made a powerful contribution to the unprecedented attention that maternal health is finally receiving on the international stage. You joined the campaign where each of us is asked to play our part to achieve a goal - an end to the unnecessary deaths of mothers and infants across the world.’

**UK Prime Minister’s wife sends Congress message of support**

The Congress in numbers

The FIGO World Congress achieved huge success, attracting a substantial number of visitors. This is borne out by impressive statistics from the Convention Centre:

- **Attendees spanning 158 countries**
- **6,400 delegates**
- **840 accompanying persons**

Large crowds at the exhibition
A significant event

‘It is an honour for me to speak on the opening of this important event, the 19th FIGO World Congress, the first on the African soil south of the Sahara and under the leadership of the honourable Professor Dorothy Shaw, known for her commitment to the promotion of women’s health and rights, and an ardent advocate for the protection of women throughout the world.

‘FIGO, an international forum of experts - together with women - is at the forefront of the preservation and the continuation of the human race.

Rights and responsibilities

‘Dedication to the reproductive and sexual health and rights of women includes a particular responsibility for promoting and protecting these rights. In the past, obstetricians and gynecologists were concerned mainly about the processes and pathologies of reproduction and reproductive health, cutting out what is diseased, if it could not be cured by medicaments and other therapies. In recent years, the focus has shifted from the processes to the personhood of women, to the ethics of interventions and research.

Gynecologists and obstetricians on the frontline

‘You are the first to see the violation of women’s rights and integrity; you are the first to see the raped woman and child; you are the first to hear of the abuse at the hands of the partner; to notice the bruises and the broken limbs; to notice the absence of the spark and life in the eyes; to feel the broken spirit.

Tackling the major issues

‘You are responsible for addressing the diseases of inequity and the conditions of servitude: tackling cancer of the cervix – by moving from classification to prevention; tackling unsafe abortion – by moving from post-abortion care to prevention of unsafe abortion through legislation and implementation of safe practices; tackling genital mutilation (both traditional and medicalised in the form of unnecessary episiotomies) – by moving from managing complications to preventing these ancient misguided practices.

The right to choose

‘The Government of South Africa is pleased to note that, under the presidency of Professor Shaw, there is particular focus on the reduction of maternal mortality, particularly from obstetric complications and from unsafe abortion. This indeed has been one of the first steps the democratic South Africa took in restoring the rights of women to choose. During that time in 1996 when the Choice on Termination of Pregnancy Act was debated in South Africa, I stated that, indeed, I will be the happiest person if, in the presence of this Act, no woman feels she needs to terminate her unplanned pregnancy! The reality is that no woman chooses to have a termination of pregnancy - she is forced into that situation.

Achieving the MDGs

‘The South African government in its quest for the attainment of the Millennium Development Goals has prioritised goal number 3, which is to promote gender equality and empowerment. Concentrating on this goal means we can reduce poverty since women and children constitute 70-80 per cent of the world’s poor. With gender
At the Congress Opening Ceremony, FIGO recognised three obstetricians/gynecologists who have excelled themselves in their service to FIGO or to women’s health, and also a highly distinguished person outside the profession who has performed a notable service to women’s health.

The FIGO Distinguished Service Awards were presented to:

**Dr Paul Van Look**
Paul Van Look retired recently as Director of the Department of Reproductive Health and Research at the World Health Organisation. His department - an international leader - combined research with the development of norms, standards and guidelines, and the provision of technical support to national sexual and reproductive health programmes.

**Dr Staffan Bergström**
Staffan Bergström has spent more than 35 years devoted to maternal and newborn health in low-resource countries. He has been particularly involved in the crisis of human resources for maternal and newborn health for the last 20 years.

**Dr André Lalonde**
André Lalonde has been the Executive Vice-President of the Society of Obstetricians and Gynecologists of Canada since 1991. He is recognised worldwide as a leader in women’s health, and as an active advocate for safe motherhood globally.

The FIGO Recognition Award
The FIGO Recognition Award was presented to Dr Thoraya Ahmed Obaid.

Thoraya Ahmed Obaid was appointed Executive Director of the United Nations Population Fund in 2001, the first Saudi Arabian to head a United Nations agency. She has consistently championed women’s and young people’s health and empowerment. She has received many awards and honours, and was recently ranked among the 50 Most Powerful Arab Women by Forbes magazine.

equality it means boys and girls will have equal opportunities for education. We also know that the education of women improves their health and that of their children.

The importance of partnerships
‘I learn that the International Confederation of Midwives has joined FIGO and other partners - such as the International Planned Parenthood Federation, Ipas, DFID, Marie Stopes International, Population Council, WHO, UNFPA and others - in efforts to expand access to safe abortion services. It is commendable and necessary indeed.

The ultimate goal: saving lives
‘Alone, experts or politicians cannot reduce maternal mortality by 75 per cent by the year 2015. But together - experts, politicians, women and advocates in women’s health - we can!’

Full speech available from communications@figo.org

In conclusion, may I echo the words of Professor Mahmoud Fathalla [former FIGO President] referring to maternal deaths: ‘...women do not die from conditions we cannot manage; they die because society has yet to determine that their lives are worth saving.’

FIGO recognises distinguished service

At the Congress Opening Ceremony, FIGO recognised three obstetricians/gynecologists who have excelled themselves in their service to FIGO or to women’s health, and also a highly distinguished person outside the profession who has performed a notable service to women’s health.

The FIGO Distinguished Service Awards were presented to:

**Dr Paul Van Look**
Paul Van Look retired recently as Director of the Department of Reproductive Health and Research at the World Health Organisation. His department - an international leader - combined research with the development of norms, standards and guidelines, and the provision of technical support to national sexual and reproductive health programmes.

**Dr Staffan Bergström**
Staffan Bergström has spent more than 35 years devoted to maternal and newborn health in low-resource countries. He has been particularly involved in the crisis of human resources for maternal and newborn health for the last 20 years.

**Dr André Lalonde**
André Lalonde has been the Executive Vice-President of the Society of Obstetricians and Gynecologists of Canada since 1991. He is recognised worldwide as a leader in women’s health, and as an active advocate for safe motherhood globally.

The FIGO Recognition Award
The FIGO Recognition Award was presented to Dr Thoraya Ahmed Obaid.

Thoraya Ahmed Obaid was appointed Executive Director of the United Nations Population Fund in 2001, the first Saudi Arabian to head a United Nations agency. She has consistently championed women’s and young people’s health and empowerment. She has received many awards and honours, and was recently ranked among the 50 Most Powerful Arab Women by Forbes magazine.

In conclusion, may I echo the words of Professor Mahmoud Fathalla [former FIGO President] referring to maternal deaths: ‘...women do not die from conditions we cannot manage; they die because society has yet to determine that their lives are worth saving.’
Within FIGO’s Saving Mothers and Newborns (SMN) Project, the Society of Obstetricians and Gynecologists of Nigeria (SOGON) has demonstrated to its government that magnesium sulphate saves lives.

Prior to the SMN Project, there was no magnesium sulphate at the Barau Dikko Specialist Hospital in Kaduna, Nigeria. At that time (in 2007) the case fatality rate for eclampsia was 35 per cent. The data collection performed by the project team identified eclampsia as a priority, and they responded by purchasing magnesium sulphate, training staff and implementing a protocol. A year later, the case fatality rate for eclampsia was calculated to be 11 per cent. This information was presented to the government and convinced them to provide a continual supply of the life-saving drug to the hospital.

Since then, there has been more training in, and promotion of, the use of magnesium sulphate in the referring hospitals and health centres. Standardised delivery log books have also been implemented to ensure proper data collection. It is hoped that the case fatality rate for eclampsia continues to decrease - we await the 2009 data to answer this.

SOGON’s SMN project is working to reduce maternal and neonatal morbidity and mortality in Nigeria by understanding the causes of death through data collection at three sites; in-service training at the participating hospitals, as well as including staff from referring health centres; advocacy at all levels of government; and community sensitization. This project has been implemented in the states of Edo, Anambra and Kaduna, specifically at Barau Dikko Specialist Hospital in Kaduna, Nnamdi Azikiwe University Teaching Hospital in Nnewi, and the University of Benin Teaching Hospital in Benin City. The project will close at the end of December 2010.
Experiences from the field…

Moldova audit project encourages drop in perinatal mortality rates

An independent review by ‘Options’ (2008), as part of FIGO’s Saving Mothers and Newborns Project, recommended that a Moldova perinatal audit project should be viewed as an international template for good practice.

The project started in 2005, following on from maternal mortality and morbidity initiatives by WHO Europe and UNICEF.

It consisted of training staff in the audit process, developing evidence-based protocols and auditing outcome through a process of multidisciplinary confidential enquiries. This method was welcomed by local stakeholders and established itself rapidly as a participatory, multidisciplinary, no-blame approach towards understanding systems’ failures in adverse outcomes, and implementing strategies for prevention. As a result, Moldova has seen a recent drop in perinatal mortality rates, and wide engagement of staff in the key stages of the audit process.

The project was first piloted in the three main perinatal centres, and is now being rolled out nationally. It is run by the Institute of Mother and Child Care in Chisinau, led by Professor Petru Stratulat, in association with the Moldovan Association of Midwives, the Association of Perinatal Medicine and the Society of Obstetricians and Gynecologists of the Republic of Moldova. It is mentored by Professor Jason Gardosi from the West Midlands Perinatal Institute on behalf of the RCOG and the FIGO Saving Mothers and Newborns Project.

The methodology, preliminary results and next steps will be presented in an International Workshop on Perinatal Audit to be held in Chisinau, Moldova, from 3-4 June 2010. It is being organised by the Moldovan Institute of Mother and Child Care, in association with the West Midlands Perinatal Institute and the Swiss Centre for International Health.

FIGO members interested in participating should contact Professor Stratulat: perinat@mtc.md
FIGO delegate bags put to good use after Congress

Just under 2,000 FIGO delegates’ bags were distributed to needy schools in Lavender Hill by the New World Foundation, following a donation by FIGO at the end of the XIX Congress in Cape Town.

Bags were distributed to church leaders, youth volunteers and community workers, as well as pupils.

An extract from a letter of thanks sent to Gill Slaughter (The Turner Group):

‘Thank you so much for the beautiful bags which you entrusted to the New World Foundation to distribute to the community.

We have made a list and will be donating about 2,200 bags firstly to all the teachers at the five high schools and 11 junior schools in Steenberg, Vrygrond/Capricom and Lavender Hill. We have included Matric learners and Grade 7 learners who will be entering high school next year.

‘Other service providers, such as the staff at the local clinics, will also benefit. We will give a bag to each of our computer trainees who are busy with job shadowing at the moment, and those completing their entrepreneurship studies.

‘Members of the Greater Retreat Youth Forum (GRYF) and our local volunteers will also receive bags. A couple of churches have asked for bags for committee members, and I will use my discretion to ensure that they go to worthy candidates. They are bound to become a very coveted item on the Cape Flats. We will keep a box at the centre as history has taught us that the bush telegraph travels very quickly, and I am sure to get requests from the many church groups and others as word spreads…’

- Jane Worthington-Fitnum, Operations Manager

International Journal of Gynecology & Obstetrics

2010 subscriptions are just $80 for members of FIGO national societies!
See www.ijgo.org/pricing for more information and to subscribe online

This journal publishes articles on all aspects of basic and clinical research in the fields of obstetrics and gynecology and related subjects, with special emphasis on matters of worldwide interest.

It features:
Editorials • Articles • Case Reports • Brief Communications • International Calendar • SOGC Clinical Practice Guidelines • Review Articles • and sections on, Contemporary Issues in Women’s Health; Averting Maternal Death and Disability; and Surgery and Technology.

International Journal of Gynecology & Obstetrics also:
• has online submission at http://ees.elsevier.com/ijg
• has a 2008 impact factor
• publishes 12 issues a year
• has high international visibility - 444,102 full-text articles were downloaded from ScienceDirect in 2009 – That’s almost one a minute!

The Journal is the official publication of the International Federation of Gynecology and Obstetrics (FIGO).
